Cloud & Platforms: Firebase, Vercel, Netlify, Hostinger, AWS, Azure, MongoDB, Heroku, WordPress, Webflow

Tools & Workflow: Git, GitHub, Postman, Vercel, Netlify, Figma

EXPERIENCE

Freelance development

2024 - Ongoing

As a freelance web developer, I work with a range of clients on projects involving websites, widgets, and web-based solutions. My work spans technologies such as WordPress, Webflow, and custom-coded applications, delivering everything from full websites to smaller, client-specific tools. This includes both design and development, as well as hosting, maintenance, and technical support.

Prototype Developer

October 2023 - January 2024

Assistas, Moss

As a Prototype Developer at Assistas, I played a pivotal role in the early stages of the idea phase, taking charge of creating an app prototype using React Native and Firebase. I designed and implemented robust authentication and database functionalities, ensuring a secure and efficient user experience. Establishing an intuitive and user-friendly design structure through an effective system hierarchy was a key aspect of my responsibilities. Additionally, I contributed to the project's visibility by developing a teaser website for the platform.

Frontend Developer & Technical Responsible

December 2022 - Ongoing

Soleklart, Norway

As a Frontend Developer and Technical Lead at Soleklart, I am responsible for all technical aspects, including designing engaging ads in Figma for Facebook, developing websites in both Webflow and code, and programming tools and projects such as a solar map and a dashboard. This role has provided me with hands-on experience in technical implementation while immersing me in a dynamic and creative environment. As the sole developer, I have taken full responsibility for hosting, maintenance, and overall technical execution.
